

For every **10 MHz** of additional licensed spectrum allocated for commercial use

\$1.739

Billion will be added to U.S. GDP

7,000

More U.S. jobs will be added

\$468

Million increase in government revenues

\$263

Million increase in wireless app and content sales

\$439

Million will increase in mobile device revenues

Now imagine what **500 MHz** of additional licensed spectrum could do over the next 10 years

\$166
BILLION

Would be added to U.S. GDP

350,000
JOBS IN THE U.S.

Would be created

\$23.4
BILLION

Increase in government revenues

\$13.1
BILLION

Increase in wireless app and content sales

\$22.0
BILLION

Increase in mobile device revenues

In order to meet growing demand for wireless broadband services, and to ensure that America keeps pace with the global wireless revolution, 500 megahertz should be made newly available for mobile, fixed and unlicensed broadband use over the next 10 years.”

-Federal Communications Commission (FCC) National Broadband Plan (3/16/10)
